Key message

Beach litter is abundant on survey sites in the OSPAR Area, with a median total count of 252 items/100 m.

Plastic material is predominant, representing 94% of the beach litter items recorded, with a median of 194 items/100 m.

SUP and SEA use categories appear to contribute to the pollution with medians of 45 items/100 m (26%) 36 items/100 m (21%) respectively.

Plastic / polystyrene pieces (21 items/100 m; 30%), strings and cords (17 items/100 m; 24%) and caps and lids (8 items/100 m; 12%) are abundant litter types.

At least 54% of the recorded items are directly targeted by OSPAR ML RAP 2014-2020 and the SUP Directive.

Only 8% of the litter items are not identified, indicating that the OSPAR survey list adequately covers the litter items recorded.

13% of the litter items are non-identifiable plastic fragments, which cannot be used for the identification of sources of pollution.
